

Confirming the database size • 80	
The psql method • 80	
The SQL method • 81	
Behind the scenes of database creation • 81	
Managing tables	84
The EXISTS option • 85	
Managing temporary tables • 86	
Managing unlogged tables • 88	
Creating a table • 89	
Understanding basic table manipulation statements	90
Inserting and selecting data • 90	
NULL values • 94	
Sorting with NULL values • 96	
Creating a table starting from another table • 97	
Updating data • 98	
Deleting data • 99	
Summary	101

 Chapter 5: Advanced Statements	 105
Technical requirements	105
Exploring the SELECT statement	105
Using the like clause	106
Using ilike	108
Using distinct	108
Using limit and offset	111
Using subqueries	112
Subqueries and the IN/NOT IN condition • 113	
Subqueries and the EXISTS/NOT EXISTS condition • 116	

Learning about joins	117
Using INNER JOIN • 119	
INNER JOIN versus EXISTS/IN • 120	
Using LEFT JOINS • 121	
Using RIGHT JOIN • 125	
Using FULL OUTER JOIN • 127	
Using LATERAL JOIN • 129	
Aggregate functions	130
UNION/UNION ALL • 133	
EXCEPT/INTERSECT • 135	
Using UPSERT	137
UPSERT – the PostgreSQL way • 137	
Learning the RETURNING clause for INSERT	140
Returning tuples out of queries • 141	
UPDATE related to multiple records • 141	
MERGE • 142	
Exploring UPDATE ... RETURNING • 144	
Exploring DELETE ... RETURNING • 145	
Exploring CTEs	145
CTE concept • 145	
CTE in PostgreSQL since version 12	146
CTE – use cases • 147	
Query recursion • 149	
Recursive CTEs • 150	
Summary	151

 Chapter 6: Window Functions	 155
Technical requirements	155
Using basic statement window functions	156

Using the PARTITION BY function and WINDOW clause • 157	
Introducing some useful functions • 158	
<i>The ROW_NUMBER function • 159</i>	
<i>The ORDER BY clause • 159</i>	
<i>FIRST_VALUE • 160</i>	
<i>LAST_VALUE • 161</i>	
<i>RANK • 161</i>	
<i>DENSE_RANK • 162</i>	
<i>The LAG and LEAD functions • 163</i>	
<i>The CUME_DIST function • 165</i>	
<i>The NTILE function • 165</i>	
Using advanced statement window functions	167
The frame clause • 167	
<i>ROWS BETWEEN start_point and end_point • 168</i>	
<i>RANGE BETWEEN start_point and end_point • 174</i>	
Summary	178
Verify your knowledge	179

Chapter 7: Server-Side Programming	181
Technical requirements	182
Exploring data types	182
The concept of extensibility • 182	
Standard data types • 182	
Boolean data type • 183	
Numeric data type • 184	
<i>Integer types • 185</i>	
<i>Numbers with a fixed precision data type • 186</i>	
<i>Numbers with an arbitrary precision data type • 186</i>	
Character data type • 188	
<i>Chars with fixed-length data types • 188</i>	

<i>Chars with variable length with a limit data types • 190</i>	
<i>Chars with a variable length without a limit data types • 191</i>	
Date/timestamp data types • 192	
<i>Date data types • 192</i>	
<i>Timestamp data types • 195</i>	
The NoSQL data type	197
The hstore data type • 198	
The JSON data type • 201	
Exploring functions and languages	205
Functions • 205	
SQL functions • 206	
Basic functions • 206	
SQL functions returning a set of elements • 207	
SQL functions returning a table • 208	
Polymorphic SQL functions • 210	
PL/pgSQL functions • 211	
First overview • 211	
Dropping functions • 213	
Declaring function parameters • 213	
<i>IN/OUT parameters • 214</i>	
<i>Function volatility categories • 216</i>	
Control structure • 219	
Conditional statements • 220	
<i>IF statements • 220</i>	
<i>CASE statements • 222</i>	
Loop statements • 225	
<i>The record type • 226</i>	
Exception handling statements • 228	
Security definer • 229	
Summary	231

Chapter 8: Triggers and Rules	233
Technical requirements	234
Exploring rules in PostgreSQL	234
Understanding the OLD and NEW variables •	234
Rules on INSERT •	235
<i>The ALSO option •</i>	236
<i>The INSTEAD OF option •</i>	237
Rules on DELETE/UPDATE •	239
<i>Creating the new_tags table •</i>	240
<i>Creating two tables •</i>	241
Managing rules on INSERT, DELETE, and UPDATE events •	242
<i>INSERT rules •</i>	243
<i>DELETE rules •</i>	245
<i>UPDATE rules •</i>	247
Managing triggers in PostgreSQL	249
Trigger syntax •	250
Triggers on INSERT •	252
The TG_OP variable •	257
Triggers on UPDATE / DELETE •	257
Event triggers	264
An example of an event trigger •	265
Summary	267
Verify your knowledge	268

Chapter 9: Partitioning	271
Technical requirements	271
Basic concepts	271
Range partitioning •	273

List partitioning • 274	
Hash partitioning • 275	
Table inheritance • 276	
<i>Dropping tables • 280</i>	
Exploring declarative partitioning	280
List partitioning • 281	
Range partitioning • 284	
Partition maintenance • 288	
<i>Attaching a new partition • 288</i>	
<i>Detaching an existing partition • 289</i>	
<i>Attaching an existing table to the parent table • 290</i>	
The default partition	291
Partitioning and tablespaces	292
A simple case study	295
Summary	303
Verify your knowledge	303

 Chapter 10: Users, Roles, and Database Security	 307
Technical requirements	308
Understanding roles	308
Properties related to new objects • 308	
Properties related to superusers • 309	
Properties related to replication • 309	
Properties related to RLS • 309	
Changing properties of existing roles: the ALTER ROLE statement • 310	
<i>Renaming an existing role • 310</i>	
<i>SESSION_USER versus CURRENT_USER • 311</i>	
<i>Per-role configuration parameters • 312</i>	
Inspecting roles • 313	
Roles that inherit from other roles • 316	

<i>Understanding how privileges are resolved • 319</i>	
<i>Role inheritance overview • 323</i>	
ACLs	323
Default ACLs • 327	
<i>Knowing the default ACLs • 330</i>	
Granting and revoking permissions	331
Permissions related to tables • 332	
Column-based permissions • 333	
Permissions related to sequences • 337	
Permissions related to schemas • 339	
<i>ALL objects in the schema • 341</i>	
Permissions related to programming languages • 342	
Permissions related to routines • 342	
Permissions related to databases • 343	
Other GRANT and REVOKE statements • 344	
Assigning the object owner • 344	
Inspecting ACLs • 345	
RLS	346
Role password encryption	352
SSL connections	353
Configuring the cluster for SSL • 353	
Connecting to the cluster via SSL • 354	
Summary	355
Verify your knowledge	356
References	356
 Chapter 11: Transactions, MVCC, WALs, and Checkpoints	 359
Technical requirements	360
Introducing transactions	360
Comparing implicit and explicit transactions • 362	
<i>Time within transactions • 368</i>	

More about transaction identifiers – the XID wraparound problem • 369	
<i>Virtual and real transaction identifiers • 371</i>	
Multi-version concurrency control • 373	
Transaction isolation levels	379
READ UNCOMMITTED • 381	
READ COMMITTED • 381	
REPEATABLE READ • 381	
SERIALIZABLE • 382	
Explaining MVCC	384
Savepoints	387
Deadlocks	390
How PostgreSQL handles persistency and consistency: WALs	393
WALs • 393	
<i>WALs as a rescue method in the event of a crash • 397</i>	
<i>Checkpoints • 398</i>	
Checkpoint configuration parameters • 399	
<i>checkpoint_timeout and max_wal_size • 400</i>	
<i>Checkpoint throttling • 402</i>	
<i>Manually issuing a checkpoint • 403</i>	
VACUUM	403
Manual VACUUM • 404	
Automatic VACUUM • 410	
Summary	412
Verify your knowledge	413

 Chapter 12: Extending the Database – the Extension Ecosystem	 415
Technical requirements	415
Introducing extensions	416
The extension ecosystem • 417	
Extension components • 418	

<i>The control file</i> • 419	
The script file • 420	
Managing extensions	421
Creating an extension • 421	
Viewing installed extensions • 422	
Finding out available extension versions • 423	
Altering an existing extension • 424	
Removing an existing extension • 427	
Exploring the PGXN client	428
Installing pgxnclient on Debian GNU/Linux and derivatives • 429	
Installing pgxnclient on Fedora Linux and Red Hat-based distributions • 429	
Installing pgxnclient on FreeBSD • 429	
Installing pgxnclient from sources • 429	
The pgxnclient command-line interface • 430	
Installing extensions	432
Installing the extension via pgxnclient • 432	
Installing the extension manually • 433	
Using the installed extension • 436	
Removing an installed extension • 437	
<i>Removing an extension via pgxnclient</i> • 439	
<i>Removing a manually compiled extension</i> • 439	
Creating your own extension	439
Defining an example extension • 439	
Creating extension files • 440	
Installing the extension • 442	
Creating an extension upgrade • 443	
Performing an extension upgrade • 445	
Summary	446
Verify your knowledge	446

Chapter 13: Query Tuning, Indexes, and Performance Optimization	449
Technical requirements	450
Execution of a statement	450
Execution stages •	451
The optimizer •	452
Nodes that the optimizer uses •	454
<i>Sequential nodes</i> •	454
<i>Parallel nodes</i> •	457
<i>When does the optimizer choose a parallel plan?</i> •	458
<i>Utility nodes</i> •	459
Node costs •	460
Indexes	462
Index types •	462
Creating an index •	463
Inspecting indexes •	465
Dropping an index •	468
Invalidating an index •	469
Rebuilding an index •	470
The EXPLAIN statement	470
EXPLAIN output formats •	473
EXPLAIN ANALYZE •	474
EXPLAIN options •	476
Examples of query tuning	480
ANALYZE and how to update statistics	491
Auto-explain	494
Summary	498
Verify your knowledge	499
